
Silkworm

Release 0.1

Bloxster

Feb 21, 2023

CONTENTS

1	Contents	3
1.1	Usage	3
1.2	API	3

Silkworm is a greenfield C++ implementation of the Ethereum protocol based on the Erigon Thorax architecture. It aims to be the fastest Ethereum client while maintaining the high quality and readability of its source code. Silkworm uses libmdbx as the database engine.

Silkworm was conceived as an evolution of the Erigon project, as outlined in its release commentary.

Silkworm is under active development and hasn't reached the alpha phase yet. Hence, there have been no releases so far.

Check out the [Usage](#) section for further information, including how to [Installation](#) the project.

Note: This project is under active development.

CONTENTS

1.1 Usage

1.1.1 Installation

To use Lumache, first install it using pip:

```
(.venv) $ pip install lumache
```

1.1.2 Creating recipes

To retrieve a list of random ingredients, you can use the `lumache.get_random_ingredients()` function:

The `kind` parameter should be either "meat", "fish", or "veggies". Otherwise, `lumache.get_random_ingredients()` will raise an exception.

For example:

```
>>> import lumache
>>> lumache.get_random_ingredients()
['shells', 'gorgonzola', 'parsley']
```

1.2 API
